PRODUCT MANAGER · OLX GROUP · PROSUS

João Vaz.

joaosfvaz@gmail.com · linkedin.com/in/joaovaz00 · joao-vaz.com

I build tools for **12,000+ car dealers** and **10M+ visitors**.

Product Manager at OLX Group (Motors, B2B), part of Prosus. I set the strategy for a 10-person team, and I build my own agents along the way.

+150% weekly engagement across 3 data products, in 18 months	**12k+** professional car dealers in PT · PL · RO	**40+** experiments — A/B, AA & fake-door	**75+** in-person dealer interviews	**90+** PMs trained on AI tooling

01 PRODUCTS

The products I lead for car dealers.

01 **AI agents for pricing and performance**

The dealers' AI assistant is shared by many teams; I lead the part for my domain. That means the agents that answer dealers' questions about their prices, their listings' performance and the market, in plain language, from our own data. I define what these agents may do, put our data behind MCP tools they can call, and test them with test questions, evals and trace reviews.

02 **Fair-price estimates**

A machine-learning estimate of what each car is worth from its specs, and how long cars like it take to sell — shown next to the dealer's asking price, and behind the price label buyers see.

03 **A live view of the car market**

Supply, demand, prices and selling speed for every segment of the market, down to the individual competing listings in it — so a dealer can decide what to buy next and how to price what is already on the lot.

04 **Listing performance**

Views, clicks, saves, messages and calls for every car and for the whole stock, benchmarked against similar cars — the one analytics product every dealer gets, on every plan.

05 **The business at a glance**

The first screen a dealer sees: how the dealership is doing, the health of its stock and alerts that lead straight to the cars that need action — across every branch of a group.

06 **Recommendations on every listing**

One concrete next step per car — renew it before it expires, raise an underpriced car towards its market value, or give it more visibility — from an engine that combines the signals of every product above.

02 AI & AGENTS

I don't just spec agents. I read their traces.

Evals
Test questions with known answers for my domain, graded on correctness, groundedness, scope and refusals — so a change is judged on evidence, not on a demo.

Traces
I read agent runs span by span to catch invented values, routing errors and the same question getting two different answers.

Mandates
What an agent may do for a user: read-only or acting, whether an action can be reverted, and when a human must confirm.

Automation classes
Assist, one-click, two-turn and scheduled — each capability gets the lightest class its risk allows.

Tools & MCP
Domain data behind MCP tools the agent calls, so answers come from the source, not from the model's memory.

Context
Personas, playbooks under a token budget, what an agent is not for and where it hands over.

Human-in-the-loop
Human review on critical paths until there are enough traces to trust an LLM judge.

Skills for PMs
I wrote the Claude skills rolled out to every PM in our unit, to define their domain's agent and to decide when a change needs a spec.

03 EXPERIENCE

Three years on one problem: helping dealers sell cars.

2025 –

Product Manager
OLX Group · Prosus · Motors B2B

Strategy for dealer insights, pricing and recommendations — from the data pipelines to the screens, with stakeholders in five markets.

OUTCOMES

+150% weekly engagement, 3 data products	**~72%** average OKR completion, 2.5 years
40+ experiments — A/B, AA, fake-door	**90+** PMs trained on AI tools, 75% now use them

DELIVERIES

AI agents for my domain
Defined what my domain's agents in the dealers' AI assistant can answer about pricing and listing performance, and tested them with evals and trace reviews.

Market insights redesign
Rebuilt the view where dealers see supply, demand and prices for every car segment, on desktop and mobile.

Segment drill-down
Let dealers go from a market segment straight to the competing listings in it, with price, mileage and days on market.

Consistent listing statistics
Moved listing statistics to one data source, so leads count the same in the product, in sales reports and in BI.

Product workshop for ~100 people
Co-designed a two-day workshop for 8 teams, with 8 Claude skills that turn dealer interviews into a scored roadmap.

AI skills for every PM
Wrote Claude skills that help each PM define what their domain's AI agent should do, and decide when a change needs a spec.

2024

Associate Product Manager

OLX Group · Prosus · Motors B2B

Same team and scope, on the machine-learning side of the product.

OUTCOMES

75+ in-person dealer interviews, PL · RO · PT	**12 mo** to promotion to Product Manager

DELIVERIES

- **Fair-price estimates**
  Brought a machine-learning price estimate into the product, so dealers see what each car is worth next to their asking price.
- **Time-to-sell estimates**
  Added how long similar cars take to sell, estimated from a car's specs.
- **Dealer research**
  Interviewed dealers in person in Poland, Romania and Portugal to understand how they price and sell their cars.

2023

Product Management Trainee

OLX Group

OUTCOMES

6 mo
from trainee to Associate PM

DELIVERIES

- **Lead-generation discovery**
  Researched how professional dealers get their leads, to find where the product could help them get more.
- **Recommendation experiments**
  Ran A/B tests with Data Science on which types of recommendation to show next to paid-visibility products.

2026

Prosus AI Accelerator

Selected · Amsterdam · 1 month

A month-long AI programme by Prosus and the THNK School of Creative Leadership, with people from across the group.

OUTCOMES

Selected from companies across the Prosus group	**1 mo** full time in Amsterdam

DELIVERIES

- **Seller-inbox prototype**
  Built with my team a prototype inbox where an AI assistant screens out buyers who aren't serious.
- **Live demo on stage**
  Presented the prototype on stage to the whole programme in Amsterdam.

TOOLKIT

Agentic AI

Evals & test sets · Tracing & observability · Mandates & permissions · Guardrails & refusals · MCP servers & tools · Agent routing & handover · Context engineering · LLM-as-judge · Human-in-the-loop

AI-assisted building

Claude Code · Cursor · Lovable · Claude skills · Scheduled agents · Video with HyperFrames

Data & experimentation

SQL · GA4 · A/B, AA & fake-door tests · Maze · Moderated & unmoderated usability tests

Delivery & technical

Jira & Atlassian · LaunchDarkly · New Relic SLIs/SLOs · Postman · GraphQL · Event-driven & microservices · Sprints & kanban

CRM & go-to-market

Braze · Intercom · Campaigns tied to in-product behaviour · Five markets

EDUCATION

MSc Industrial Engineering & Management University of Minho & TU Graz · 2021–2023

LANGUAGES

Portuguese native

English C2 · proficient

04 PROJECTS

Things I built myself, from idea to working product.

KNOWLEDGE · SCHEDULED AGENTS

PM-OS

A knowledge base my team's answers live in, kept true by seven scheduled Claude routines: meetings file themselves and stale pages are made to admit it.

MCP · PYTHON

Team-context MCP

A read-only MCP server that lets the company's internal AI assistant answer stakeholders' questions about my team's work — served from a laptop through a tunnel.

CIVIC · NEXT.JS · OPEN DATA

Portugal Explicado

Taxes, Parliament, laws and the economy of Portugal in plain Portuguese — every number linked to an official source, with open data imported every day.
(https://joaosfvaz.github.io/portugal-explicado/)

CHESS · AWS SERVERLESS

Tabiya

A chess coach that explains every move in plain English: a serverless pipeline downloads my games, analyses them with Stockfish and writes a report.
